Wow your Friends, Family and Colleagues with your knowledge of Cameras even if you have never held one before

The Nikon D3200, being an entry-level DSLR, is designed to be a tiny and ultra-lightweight camera, with dimensions of 125x96x76.5mm (about the same as the D3100), making it Nikon's current smallest DSLR. While the existence of a mirror and a pentamirror makes it less compact than other mirrorless cameras, it is still relatively tiny when compared to high-end cameras like the Nikon D800. However, the recently launched Canon EOS Rebel SL1 grabbed the title of "world's smallest DSLR" this week, measuring 117x91x69mm. The Nikon D3200 is the same weight as its predecessor, the Nikon D3200, which was the lightest Nikon DSLR made to date at 455 grams without the lens.

The Nikon D3200 is a little but significant improvement over its predecessor. The D3200 is a powerful DSLR camera for starting photographers, with a high-resolution 24.2 MP DX-format CMOS sensor, full HD video recording capability, and a lightweight camera body.
